### **DETAILED ACTION**

Claims 1 – 13 are pending.

#### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless – (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 – 3, 5 – 6, and 8 – 10 are rejected under 35 U.S.C. 102(b) as being anticipated by Jacobs.

Jacobs, U.S. Patent 5,055,097, discloses an extended integration semiconductor structure. As shown in Figure 2E, a first die 25a has at least one die pad. A second die 25b also has a die pad. An electrical interconnect 21 between the first and second die. As shown in Figure 8, redistribution of contacts 26 on a chip 25 is accomplished in the same layer.

#### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1 – 3, 5 – 6, 8 - 10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Jacobs, U.S. Patent 5,055,907.

In regard to claims 11 – 13, the prior art does not teach or suggest the recited integrated circuit die ship set, each specifically having bipolar components. However, column 7, line 15 describes that the chips can be off the shelf. Bipolar components are well-known off-the-shelf components and would have been obvious to one of ordinary skill in the art at the time the invention was made.

#### ***Allowable Subject Matter***

Claims 4 and 7 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The prior art does not teach or suggest the recited wafer-scale integrated circuit device.

#### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Jacobs, U.S. Patent No. 5,192,719, discloses a low cost lightweight, fast dense reliable extend integration semiconductor structure.

Cole et al., U.S. Patent 5,527,741 discloses a circuit module.
